ABSTRACT

The Chabot College (California) Student Outcomes Report, fall 1996, is a compilation of data and trends in four major areas of the college's student outcomes: (1) course success and withdrawal; (2) persistence; (3) degree and certificate completion; and (4) transfer. These data provide information on all students, according to their status such as new or continuing, full- or part-time, male or female, race-ethnicity, as well as their matriculation and program status. Both overall and detailed student outcome measures are provided. Besides providing the overall success, withdrawal, persistence, graduation, and transfer rates at Chabot, the information in this report is used to identify the groups of students who are having the most difficulty in progressing toward their educational goals, and to highlight some of the campus programs that support student progress and success. Since this information covers the years before and after the quarter-to-semester conversion at Chabot College, the data can be used as the semester baseline level from which to monitor and evaluate outcomes in the future. The report contains numerous data charts and tables, and includes an appendix of methods and definitions. (AS)

I. Introduction

Content of the report

The Chabot College Student Outcomes Report is a compilation of the most recent numbers, rates, and trends at Chabot College in four major areas of community college student outcomes—course success and withdrawal, persistence, degree and certificate completion, and transfer. These numbers and rates are provided for all Chabot students as well as for subgroups of students such as new and continuing students, full-time and part-time students, women and men, students in major race-ethnicity groups, and students who have and have not received various Matriculation and other student services and programs. Most of these measures are shown through 1995-96, for the several years before and after the Chabot-Las Positas Community College District converted from the quarter system to the semester system in Fall 1994.

Organization of the report

Both overall and detailed student outcome measures and summaries are provided in this report. For the latest overall college rates for all the student outcome measures, see the report summary on the next page. For more detailed summaries of each outcome measure and the differences by student subgroup and year, see the summary pages at the beginning of each chapter. To examine the actual student outcome numbers and calculated rates, to compare the rates for subgroups of students to the average rate, and to see how these rates have changed in the last few years, see the detailed tables and graphs in each chapter.

Uses of the report

Besides providing the overall success, withdrawal, persistence, graduation, and transfer rates at Chabot, the information in this report can be used to identify the groups of students who are having the most difficulty in progressing toward their educational goals. It can also highlight some of the campus programs that support student progress and success. This information can contribute to brainstorming and planning discussions within the campus, divisions, and departments about how to best promote the success of all students. In addition, since many of these rates and numbers have been calculated for the first time for all students and student subgroups, and since these data cover the years before and after the quarter-to-semester conversion, this information can be used as the semester baseline level from which to monitor and evaluate these outcomes in the future. The Office of Institutional Research welcomes any suggestions about how this information can be made more helpful to the campus community.

Carolyn L. Arnold, Ph.D.
Chabot College Institutional Researcher
Fall 1996

Summary of report

Course and student success and withdrawal rates	3
Fall 1995 Course success rate: Course withdrawal rate:	66% 22%
Fall 1995 Students with at least one successful course: Students who withdrew from all courses:	78% 14%
Persistence rates of new students Fall 1995 to Spring 1996: Fall to Spring persistence rate:	68%
Persistence rates of new Basic Skills students Persistence to next level within 2 years: Autumn 93 to Spring 95	5
English Basic Skills into English 1A:	41%
Basic Math into Elementary Algebra:	41%
Elementary Algebra into Intermediate Alg:	45%
Number of degree and certificate graduates	
AA/AS degree graduates: 1995-96:	601
Occupational certificate graduates: 1995-96:	137
Number of transfers to CSU/UC	
Full-year transfers to CSU: 1995-96:	831
Full-year transfers to UC: 1994-95:	161
Transfer-readiness rate	
Percentage of transfer-directed new students in Fall 1991	
who became ready to transfer within four years:	40%

The student outcomes of course success and withdrawal, persistence, degrees and certificates, and transfer represent three major missions of California's open-access community colleges—promoting student success in college, awarding AA/AS degrees and occupational certificates, and preparing students to transfer to four-year institutions. Since students come to community colleges with a variety of educational goals and levels of academic preparation, it is a challenging job to fulfill these missions for all students.

The student outcomes reported here show how many students are succeeding, persisting, and completing their education at Chabot, and how these rates varied by type of student. Many students experienced academic success at Chabot—an average of 66 percent of students in each classroom—and most (78%) students succeeded in at least one course. Many students persisted in their education at Chabot. Of new students in the Fall, 68 percent returned the next Spring. Of students in English basic skills, 41 percent persisted to college English within two years. Of students in Math basic skills, 41 to 45 percent persisted to the next higher Math level within two years. Many students completed their education at Chabot and took the next step. The number of degree and certificate graduates in 1993-94 and the number of Chabot students transferring to CSU and UC in 1994-95 were the highest they have ever been. Of the students who enrolled in college-level English and Math, 40 percent became eligible to transfer within four years. Over the last 10 years, the number of transfers to CSU has been stable and the number of transfers to UC has increased. However, the number of AA/AS and certificate graduates has declined. This report is offered as part of the ongoing discussion about the optimal level of these student outcomes and how the success of all groups of students can be improved.

II. Course and student success and withdrawal rates Summary

A. Success and withdrawal rates: Autumn 1993-Fall 1995

In this chapter, pages five and six provide the Chabot College course and student success and withdrawal rates for all students, new students, and continuing students in Autumn 1993, Fall 1994, and Fall 1995.

All students: Autumn 1993 to Fall 1995 (page 5)

Course rates

In Fall semester 1994, the first term of the semester system, more students withdrew from courses than in Autumn Quarter 1993. The course withdrawal rates rose from 17 percent in Autumn 1993 to 22 percent in Fall 1994, and remained at 22 percent in Fall 1995. Course success rates declined from 71 percent in Autumn 1993, to 67 percent in Fall 1994 and 66 percent in Fall 1995. These changes are the usual result of the increased term length when changing from 12-week quarters to the 17-week semesters, and it is too early to tell whether the new rates are stable or not. The Fall 1995 rates are:

Fall 1995

Course success rate:

66%

Course withdrawal rate:

22%

Student rates

Student success and withdrawal rates changed only slightly between the quarter and semester systems. In Autumn 1993, 10 percent of the students withdrew from all of their courses, whereas in Fall 1994, 13 percent withdrew completely and in Fall 1995 14 percent withdrew completely. Student success rates declined slightly from 81 percent in Autumn 1993, to 79 percent in Fall 1994 and 78 percent in Fall 1995. These changes are so small that it is too early to tell whether they were the result of the quarter to semester conversion or whether they represent random fluctuation in these rates. The Fall 1995 rates are:

Fall 1995

Students with at least one successful course: 78%

Students who withdrew from all courses: 14%

New students: Autumn 1993 to Fall 1995 (page 6)

New students experienced the same changes as all students between the quarter and semester systems: course success rates declined and course withdrawal rates rose, but student success and withdrawal rates changed only slightly. New students have lower success rates than all students. The Fall 1995 rates are:

Course rates

Fall 1995

Course success rate:

59%

Course withdrawal rate:

24%

Student rates

Fall 1995

Students with at least one successful course: 73%

Students who withdrew from all courses:

15%

Continuing students: Autumn 1993 to Fall 1995 (page 6)

Continuing students experienced the same changes as all students between the quarter and semester systems: course success rates declined and course withdrawal rates rose, but student success and withdrawal rates changed only slightly. Continuing students have higher success rates than all students. The Fall 1995 rates are:

Course rates

Fall 1995

Course success rate:

68%

Course withdrawal rate:

21%

Student rates

Fall 1995

Students with at least one successful course: 79%

Students who withdrew from all courses:

14%

Course and student success and withdrawal rates Summary (continued)

B. Course and student success and withdrawal rates: Fall 1995 and Fall 1994
In this chapter, pages seven through ten provide the Chabot College course success, non-success, and withdrawal rates for new and continuing students in Fall 1995, and the student success, completion, and withdrawal rates for new students in Fall 1994, by various student characteristics and student services used.

Course Success Rates: Fall 1995 (pages 7-9)

These tables show the following differences in course success rates:

Among all students (average success rate: 66%)

• Continuing students had higher success rates than new students (68% vs. 59%)

Among new students (average success rate: 59%)

- Women had slightly higher success rates than men (61% vs. 57%)
- Asian American and white students had higher than average success rates (> 65%)
- Filipino, Latino, Middle Eastern, Native American, and Pacific Islander students had average success rates (> 55%)
- African American and other students had lower than average success rates (<50%)
- Students whose primary language is other than English had slightly higher success rates than native English speakers (63% vs. 58%)
- Students 18-29 years old had average success rates, while students 30 years and older had higher than average success rates
- Full-time students had the highest success rates (65%), followed by part-time students with less than 6 units (54%). Part-time students with 6-11 units had lower than average success rates (48%).
- Students who received Matriculation services (assessment, orientation, counseling, student educational plan) and students who visited the Transfer Center or Career Center had higher success rates than students who did not obtain these services

Among continuing students (average success rate: 68%)

- Women had slightly higher success rates than men (70% vs. 66%)
- Asian American, Native American, and white students had higher than average success rates (> 70%)
- Filipino, Latino, Middle Eastern, Pacific Islander, and other students had average success rates (> 60%)
- African American students had lower than average success rates (55%)
- Students under 22 years old had lower than average success rates, students 22-29 had average success rates, and students 30 years and older had higher than average success rates
- Full-time and part-time students with less than 6 units had slightly higher success rates (70%).

 Part-time students with 6-11 units had slightly lower success rates (64%).
- Students who received the Matriculation services of counseling and a student educational plan and students who visited the Transfer Center or Career Center had somewhat higher success rates than students who did not obtain these services.

Student Success Rates Among New Students: Fall 1994 (page 10)

These tables show that the following groups of new students were more likely to complete and succeed in at least one course, and were the least likely to withdraw from all their courses:

- Full-time students
- Students who had received counseling and assessment
- Students within every race-ethnicity group who had received counseling and assessment

q

Course success and withdrawal rates, by courses and students Transition from Quarter to Semester System: Autumn 1993 to Fall 1995

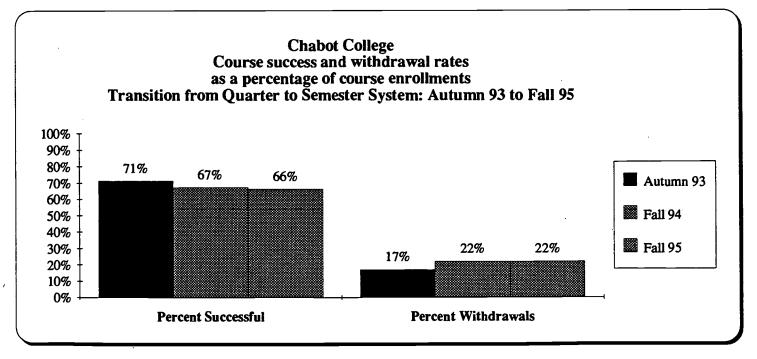

All students

In Fall Semester 94, the first term of the semester system, more students withdrew from courses than in Autumn Quarter 93. An increase in withdrawals is the usual result of the increased term length when changing from quarters to semesters. However, withdrawal rates rose only 5 percentage points between Aut 93 and Fall 94. By Fall 95, withdrawal rates had stabilized at 22 percent and success rates had stabilized at 66 percent. Of students in Fall 95, only 14 percent withdrew from all of their courses, 86 percent completed at least one course, and 78 percent completed at least one course successfully.

By course enrollments:	Total based on every COURSE enrollment, so students are counted for each course taken
By students: Success in course:	Total based on the number of STUDENTS, regardless of number of courses taken Enrolled at end of course and received an A, B, C, or CR
Non-success in course: Completion of course: Withdrawal from course:	Enrolled at end of course and received a D, F, NC, or Incomplete (I) Enrolled at end of course and received a successful or non-successful grade Left after Census and received a W (withdrawal)

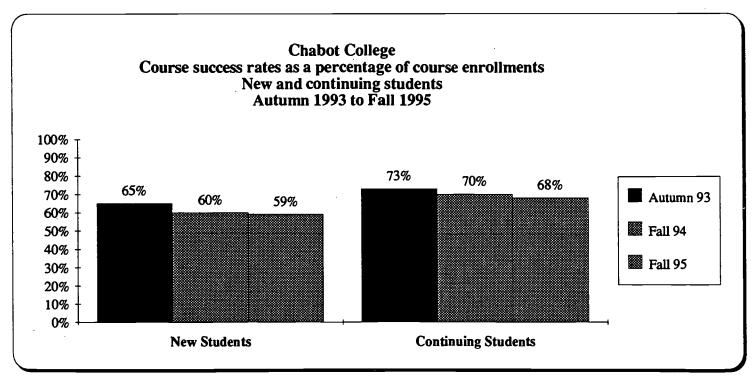

Course success and withdrawal rates, by courses and students Transition from Quarter to Semester System: Autumn 1993 to Fall 1995

New and continuing students

This table shows course success and withdrawal rates separately for new and continuing students for Autumn 93, Fall 94, and Fall 95. In each Fall, continuing students had higher success rates and slightly lower withdrawal rates than new students. Both groups experienced an initial drop in success rates and a rise in withdrawal rates between the Aut 93 quarter system and the Fall 94 semester system. However, by Fall 95, the rates appeared to have stabilized for both groups. In Fall 95, course success rates were 59 percent for new students and 68 percent for continuing students.

III. Persistence Rates Summary

A. Persistence rates of new students: Autumn 1993-Spring 1996

In this chapter, the first page of tables (page 13) provides the Chabot College term-to-term persistence rates for all new students from Autumn 1993 to Spring 1996. The next six pages of tables (pages 14-19) provide the Chabot College term-to-term persistence rates for new students from Autumn 1993 to Spring 1996, by various student characteristics and student services used.

All new students: Autumn 1993 to Fall 1995 (page 13)

This table shows the following patterns in persistence rates:

- Persistence is always higher from Fall to Spring than from Spring to Fall.
- The persistence rates of new students were maintained during the quarter-to-semester conversion
- Latest Fall to Spring persistence rate: Fall 95 to Spr 96: 68%

New students by student characteristics: Autumn 1993 to Fall 1995 (pages 14-19)

These tables show the following differences and changes in persistence rates:

Differences among new students in latest persistence rate (Fall 95-Spr 96: 68%)

- Women had slightly higher persistence rates than men (70% vs. 66%)
- Asian American, Filipino, Middle Eastern, and other students had higher than average persistence rates (>73%)
- Latino, Pacific Islander, and white students had average persistence rates (> 63%)
- African American and Native American students had lower than average persistence rates (<60%)
- Students whose primary language is other than English had higher persistence rates than native English speakers (71% vs. 64%)
- Students 18-19 years old had higher than average persistence rates (76%), while students 20 years and older had lower than average persistence rates (<63%)
- Full-time students had the highest persistence rates (87%), followed by part-time students with 6-11 units (66%). Part-time students (under 6 units) had much lower persistence rates (39%).
- Students with the educational goal of transfer had a higher than average persistence rate (77%). Students who had the goal of an AA/AS degree, personal development, or were undecided had an average persistence rate (>63%), and students with the goal of job training had a lower than average persistence rate (50%).
- Students who received Matriculation services (assessment, orientation, counseling, student educational plan, tutoring) and students who visited the Transfer Center, Career Center, or Student Services Computer Center had much higher persistence rates than students who did not obtain these services.
- Students in the Early Decision program, in the EOPS program (Fall 94), and student athletes had much higher persistence rates than students who were not in these programs.
- Students from all the local high school districts (45% of new students) had average or higher than average persistence rates. Students from the Castro Valley, New Haven, and San Lorenzo districts and from Moreau had the highest persistence rates (>73%)

Changes among new students in persistence rates between Autumn 93 and Fall 95

- Increases (>5 percentage points) in persistence rates occurred among other minority students and students from the New Haven and San Lorenzo high school districts.
- Decreases (>5 percentage points) in persistence rates occurred among African American students, students 20-21 years old and over 30 years old, part-time students, EOPS students, DSPS students, athletes, and students from other California high school districts.

11

Persistence Rates Summary (continued)

B. Persistence rates of new Basic Skills students: Autumn 1993-Spring 1995 In this part of the chapter, page 20 provides the English and Math completion rates for Basic Skills students who were new students in Autumn 1993, and their persistence rates to the next higher-level courses in these areas within two years (by Spring 1995). Pages 21 through 26 provide these persistence rates by gender, race-ethnicity, disability, and age for each Basic Skills level in English and Math.

New Basic Skills students: Autumn 1993 to Spring 1995 (page 20)

Of new students who enrolled in the following Basic Skills courses in Autumn 1993, the following percentages completed the courses with an A, B, C, D, or CR:

Completion rates:

• English 100 courses:	55%
• Math 76: Basic Math:	62%
• Math 66: Elementary Algebra:	63%

Of those students who completed these courses, the following percentages persisted to and completed the next higher-level course within two years (by Spring 1995):

Persistence rates:

English Basic Skills into English 1A:
Basic Math into Elementary Algebra:
Elementary Algebra into Intermediate Alg:
41%
45%

Basic Skills persistence rates by gender, race-ethnicity, disability, and age: Autumn 1993 to Spring 1995 (pages 21-25)

These tables show the following differences in persistence rates among new students:

English Basic Skills to English 1A (average: 41%)

- Men had higher persistence rates than women (48% vs. 37%)
- White and Latino students had higher than average persistence rates (both 47%)
- African American and Asian American students had lower than average rates (33% and 34%)

Basic Math to Elementary Algebra (average: 41%)

- Women had higher persistence rates than men (44% vs. 36%)
- African American and white students had higher than average persistence rates (50% and 55%)
- Filipino and Latino students had lower than average persistence rates (25% and 18%))

Elementary Algebra to Intermediate Algebra (average: 45%)

- Men had higher persistence rates than women (51% vs. 40%)
- Filipino and Latino students had higher than average persistence rates (71% and 53%))
- African American and white students had lower than average persistence rates (35% and 28%)

12

Persistence Rates of New Students

Before and After the Quarter-Semester Conversion: Autumn 1993 to Spring 1996

Did the persistence rates of new Chabot students differ between the years before and after the quarter-to-semester conversion? The persistence rate is defined as: of new students enrolled in at least one course by Census during their first term, the percentage who were enrolled in at least one course during the next term. The table and graph show that the persistence rate is always lowest between Spring and Fall, but this rate was a little higher after the conversion (44% vs. 41%). The persistence rate between both Fall and Spring semesters (68%) was about as high as the rate between the Autumn and Winter quarters (69%), and was higher than the rate between the Winter and Spring Quarters (62%). Therefore, the persistence rates of new students were maintained and in some cases increased during the quarter-to-semester conversion.

Persistence Rates by quarter/semester

Persistence Rate Definition

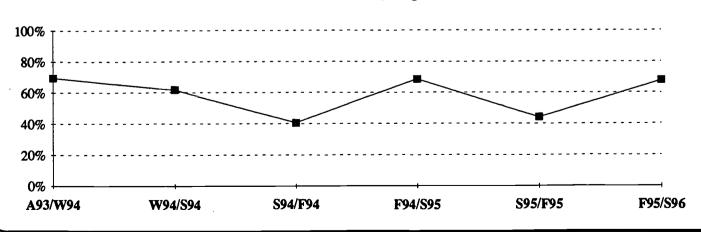

Of new students who enroll by Census in any courses during their first term, the percentage who are enrolled in any courses in the following term.

Definition of enrolled:

Received any grade: A, B, C, D, F, CR, NC, W, or Inc.

Term 1 to Term 2	Number of new students enrolled in Term 1	Percentage of Term 1 students who enrolled in Term 2
Aut 93 to Win 94	2,762	69%
Win 94 to Spr 94	1,085	62%
Spr 94 to Fall 94	947	41%
Fall 94 to Spr 95	2,282	68%
Spr 95 to Fall 95	817	44%
Fall 95 to Spr 96	2,193	68%

Persistence Rates of New Chabot Students Percentage of enrolled students in the first term who enrolled during next term Autumn 1993 to Spring 1996

Persistence rates of new students

IV. Degrees and certificates of graduates Summary

A. Degrees and certificates

In this chapter, page 28 provides the number of Chabot College degree and occupational certificate graduates for each year between 1990-91 and 1995-96, by year and by gender. The next page (page 29) provides the percentage of graduates by race-ethnicity from 1992-93 to 1994-95. The final page in the chapter (page 30) lists the majors of the 1995-96 graduates.

Degrees and certificates by year and gender: 1990-96 (page 28)

This page shows the following patterns in the number and gender of students earning degrees and certificates between 1990-91 and 1995-96:

• There has been a decline in the number of AA/AS graduates since 1990-91.

• The number of occupational certificates has remained somewhat stable since 1990-91.

• A surge in AA/AS degree and certificate graduates in 1993-94 may have been caused by students graduating before the quarter-to-semester conversion in Fall 1994.

• Women have consistently earned about two thirds of degrees and over half of certificates.

Degrees and certificates by race-ethnicity: 1992-95 (page 29)

This page shows the following patterns in the proportion of students in each race-ethnicity group earning degrees or certificates between 1992-93 and 1994-95:

- Asian American and Filipino students have increased their proportion of students earning degrees or certificates since 1992-93.
- African American, Native American, Latino, and Pacific Islander students have maintained their proportion of those earning degrees or certificates.
- White students have decreased their proportion of those earning degrees or certificates.

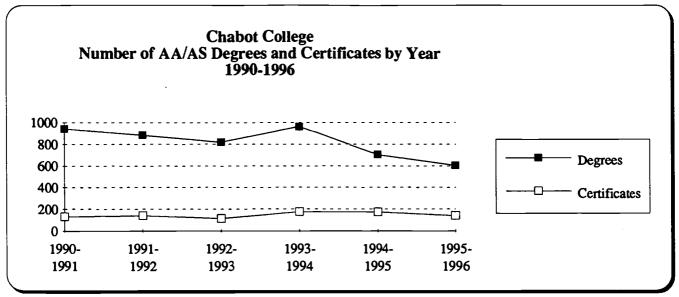

Degrees and certificates by major: 1995-96 (page 30)

This page shows the following distributions of degree and certificate majors in 1995-96:

- Over half of the AA/AS degree graduates have a General Education major, which is most often used to fulfill transfer requirements.
- The highest percentage of AA/AS majors are in Administration of Justice, Business Administration, Dental Hygiene, Fire Service Technology, Interdisciplinary Studies, and Nursing.
- The highest percentage of occupational majors are in Automotive Mechanics/Service, Dental Assisting, Early Childhood Development, Fire Service Technology, and Medical Assisting.

IV. Transfer Rates and Transfer Readiness Rates Summary

Transfer Rates to CSU/UC vs. Transfer Readiness Rates

Transfer rates express the percentage of community college students who actually transfer to four-year colleges. However, while our students transfer to many 4-year colleges, only UC and CSU report our transfers to us. Therefore, the transfer rate does not include our students at other four-year colleges. In addition, the transfer rate depends upon how the group of potential transfer students is defined—should all students at the community college be considered potential transfer students, even if they do not intend to transfer, or should we consider only those who act like they intend to transfer, such as those who take more than one course? If we define potential transfer students as the *total* number of Chabot students each Spring, then only 7 to 10 percent of these students transfer to UC/CSU. However, if we follow first-time students who entered one year and *earned 12 or more credits*, and calculate the percentage of this group who transferred to UC or CSU within *four* years, then the current transfer rate is about 23 percent.

Transfer readiness rates are seen as more appropriate measures of whether a community college is doing its job of preparing students to transfer, regardless of whether or where the students transfer. Transfer readiness rates are based on how many new community college students show an intention to transfer (are transfer-directed) and how many become prepared to transfer (transfer-ready) within four years. The transfer readiness rate is calculated as the percentage of students who become transfer ready within four years out of those who are transfer directed. The latest Chabot College transfer readiness rate is 40 percent.

Transfer Rate I. Of all students enrolled in Chabot College each Spring quarter/semester, the percentage who enrolled at CSU/UC during the following year.

	<u>Transfer Kate I</u>
Spring 1988/Enroll at CSU/UC during 88/89	7.3%
Spring 1989/Enroll at CSU/UC during 89/90	7.6%
Spring 1990/Enroll at CSU/UC during 90/91	8.1%
Spring 1991/Enroll at CSU/UC during 91/92	7.5%
Spring 1992/Enroll at CSU/UC during 92/93	6.6%
Spring 1993/Enroll at CSU/UC during 93/94	8.5%
Spring 1994/Enroll at CSU/UC during 94/95	9.8%
	G 11

Transfer Rate II. Of first-time college students who entered Chabot College and all California Community Colleges (CCCs) in a given year and earned 12 or more college credits, the percentage who enrolled at CSU or UC within 4 years.

	Transfer Rate II		
	<u>Chabot</u>	All CCCs	
Enter comm coll 1986/Enroll at CSU/UC by 1990	21.9%	22.0%	
Enter comm coll 1987/Enroll at CSU/UC by 1991	21.1%	20.8%	
Enter comm coll 1988/Enroll at CSU/UC by 1992	18.5%	19.0%	
Enter comm coll 1990/Enroll at CSU/UC by 1994	22.6%	20.6%	

NOTE: Las Positas students were combined with Chabot students in the 1986 and 1987 entering classes. SOURCE: Center for the Study of Community Colleges, Transfer Assembly 1992, 1993, 1994, 1996

Transfer Readiness Rate. Of new students who enrolled in Fall 1990 or 1991 and became transfer directed, the percentage who became transfer ready within four years. Being transfer directed is defined as enrolling in English 1A and College Algebra. Becoming transfer ready is defined as successfully completing English 1A and College Algebra and earning 60+ units with a GPA of 2.0.

	Number of	Number with	in four years	Chabot College

CHABOT and LAS POSITAS COLLEGES Transfers to CSU and UC: District Totals

How many Chabot-LPC students transfer to four-year institutions, and how does this compare to students from other California community colleges? While C-LPCCD students transfer to many public and private colleges throughout California and the U.S., the only colleges that consistently report back to us the number of C-LPCCD students enrolled at their campuses are the California State University (CSU) and University of California (UC) systems. Therefore, only transfers to CSU and UC are presented here.

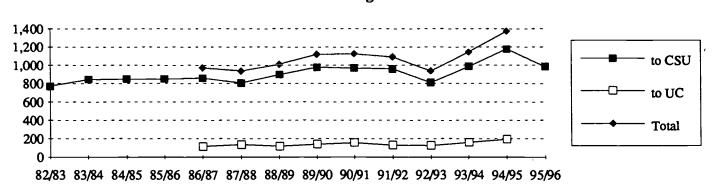

The transfer trends in the district reflect the same fluctuations in CSU transfers that have occurred among all California community colleges. C-LPCCD transfers to CSU rose temporarily in 1994-95, as many students transferred before the Fall 94 semester conversion.

Number of Transfers to CSU and UC from Chabot-Las Positas and from all California Community Colleges (CCCs) during full academic years: 1982-96

CHABOT and LAS POSITAS COLLEGES Transfers to CSU and UC: Separately by College

CSU and UC began reporting transfers from Chabot and Las Positas separately in 1992-93. Until then, all transfer students from C-LPCCD were reported together. In 1994-95, Chabot had the highest number of transfers ever to CSU—706 in the Fall and 1,058 in the entire year—despite the fact that 121 students who previously would have been included in the Chabot count were by then identified as transfers from Las Positas. However, since Chabot CSU transfer numbers returned to previous levels in 1995-96, many students may have rushed to transfer before the Fall 94 semester system started. Chabot transfers to UC have increased slightly over the last 10 years.

Chabot College Transfer Readiness Study Fall 1991 New Students

Transfer Readiness Status within Four Years

This study measures the percentage of Chabot students who become eligible to transfer within four years, out of the Chabot students who become transfer directed by taking English 1A and transfer Math. This transfer eligibility rate allows us to measure how many students we prepare for transfer to any college rather than how many arrive at the 4-year colleges in California. Shown here are the results for new (first-time college) students who entered Chabot in Fall 1991. Of the 2,558 new students, 19% became transfer directed within four years, and 40% of those became eligible to transfer.

Transfer directed:

Enrolled in English 1A and transfer Math at any time within the four years

Transfer eligible:

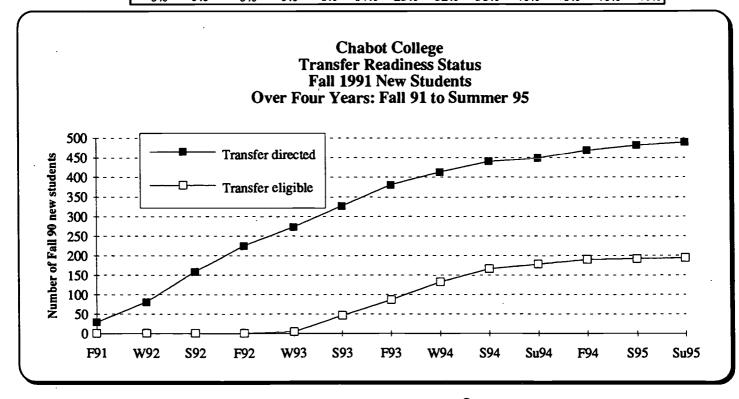

Completed 56+ transfer units
Successful completion of English 1A and transfer Math
Transfer GPA of 2.00+

Number of Fall 1991 new students still enrolled, and transfer readiness status, cumulative by quarter

Chabot College Transfer Readiness Study Fall 1991 New Students

Transfer Readiness Status within Four Years By Educational Goal and Attendance Status

This study measures the percentage of Chabot students who become eligible to transfer within four years, out of the Chabot students who become transfer directed by taking English 1A and transfer Math. Shown here are the numbers of students who were new (first-time college) students in Fall 1991 and who became transfer directed and/or transfer eligible within 4 years, for students with each educational goal and type of attendance in Fall 1991. Students with a goal of transfer, who attended full-time, or took 6-11 units in Fall 91 were much more likely to become transfer directed and transfer eligible.

Transfer directed:

Enrolled in English 1A and transfer Math at any time within the four years

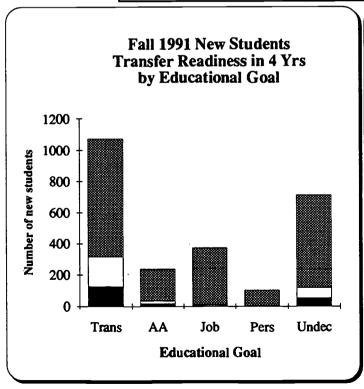

Transfer eligible:

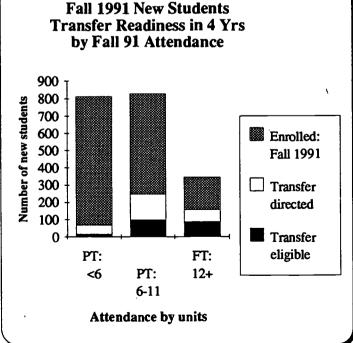

Completed 56+ transfer units
Successful completion of English 1A and transfer Math
Transfer GPA of 2.00+

Chabot College Transfer Readiness Study Fall 1991 New Students

Transfer Readiness Status within Four Years by Race-ethnicity and Athlete status

This study measures the percentage of Chabot students who become eligible to transfer within four years, out of the Chabot students who become transfer directed by taking English 1A and transfer Math. Shown here are the numbers of students who were new (first-time college) students in Fall 1991 and who became transfer directed and/or transfer eligible within 4 years, by student race-ethnicity and athlete status. Athletes and Asian American and Filipino students were more likely than non-athletes and African American, Latino, and white students to become transfer-directed.

Transfer directed:

Enrolled in English 1A and transfer Math at any time within the four years

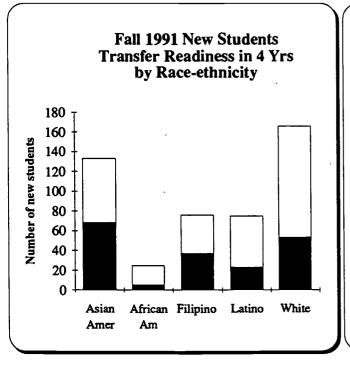

Transfer eligible:

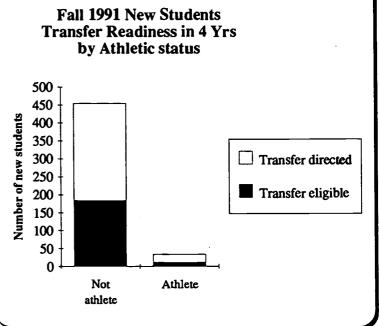

Completed 56+ transfer units Successful completion of English 1A and transfer Math Transfer GPA of 2.00+

•	Race-et	thnicit	y			Athlete status	thlete status during 4 years

VI. Appendix

Methods

Measuring success and withdrawal rates by courses and students

There are two ways to count success and withdrawal rates:

1) By course sections.

This method counts the grades for each course section that each student takes, so the total number of grades equals the total number of course enrollments. This total is much more than the number of students, because many students take more than one course.

This method allows us to calculate the percentage of the total grades that were successful (A-C or CR), non-successful (D, F, NC, I), or withdrawals (W). These percentages will total to 100 percent.

The course rates count enrollments in each course section, and show the total number and percentage of success and withdrawal grades in all the course sections. These course rates provide a useful summary of how students are doing at the course section level at Chabot. We can look at these percentages by type of student and student services.

2) By students

This method counts the total number of students. Since each student may be taking more than one course, we can only measure the different patterns of course success or withdrawal for each *student*, rather than the percentage of course successes or withdrawals for each *course section*. The major patterns that we look at are:

what percentage of the students:

- successfully completed at least one course
- completed at least one course
- withdrew from all their courses

The percentage who withdraw completely and those who complete at least one course will add to 100 percent. The percentage who successfully complete at least one course represent part of the percentage who completed at least one course, so these percentages cannot be added.

The student rates count by *student*, and show the total number and percentage of *students* who are succeeding, completing, and withdrawing at Chabot. The student rates provide a useful summary of how students are doing at the *student* level at Chabot—how many students experience any course completion or success, and how many withdraw from all their courses and leave Chabot.

Differences between course rates and student rates

The course success rates will be lower and the course withdrawal rates will be higher than the student rates because the course rates count each grade the students receive. The student withdrawal rates are lower than the course rates because they count the percentage of students who withdraw from all their courses and left Chabot, rather than counting each withdrawal even if they completed other courses. The student success rates are higher because they count the number of students who had the minimal number of at least one course completion and course success.

Definitions Success, completion, withdrawal, and persistence rates

Terms used

Enrollments/enrolled: Enrolled on Census Day (end of 4th week) and received an A-F, CR, NC, W, or Inc.

By course enrollments: Total based on every COURSE enrollment, so students are counted

for each course section taken

By students: Total based on the number of STUDENTS, regardless of number of courses taken Success in course: Enrolled at end of course and received an A, B, C, or CR

Non-success in course: Enrolled at end of course and received a D, F, NC, or Incomplete (I)

Completion of course: Enrolled at end of course and received a successful or non-successful grade

Left after Census and received a W (withdrawal) Withdrawal from course:

Definitions

Can be calculated for all students, or any subgroups of students

Course success, completion, and withdrawal rates

Total enrollments: Number of successful grades + Non-successful grades + Withdrawals

Course success rate: Number of successful grades

Total enrollments

Number of non-successful grades Course non-success rate:

Total enrollments

Course completion rate: Number of successful + non-successful grades

Total enrollments

Course withdrawal rate: Number of withdrawals

Total enrollments

Student success, completion, and withdrawal rates

Total students: Number of students enrolled on Census Day

Student success rate: Number of students with a successful grade in at least one course

Total students

Number of students with a completion grade in at least one course Student completion rate:

Total students

Number of students with a withdrawal in all their courses Student withdrawal rate:

Total students

Persistence from term to term

Of students who enroll by Census Day in at least one course during one term (term 1), the percentage who are enrolled in at least one course by Census Day in the following term (term 2)

Persistence rate: Number of students enrolled in any courses in term 2

Number of students enrolled in any courses in term 1

Persistence from Basic Skills to College-level courses

The following definitions were unique to the Basic Skills Persistence Study:

Completed a basic skills course with an A, B, C, D, or CR in Autum 1993 Completed:

Completed a higher or college-level course with an A, B, C, D, or CR within two years Persisted:

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic/optical media, and sold through the ERIC Document Reproduction Service (EDRS) or other ERIC vendors. Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following two options and sign at the bottom of the page.

Check here For Level 1 Release: Permitting reproduction in microfiche (4" x 6" film) or other ERIC archival media (e.g., electronic or optical) and paper copy.

The sample sticker shown below will be affixed to all Level 1 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

The sample sticker shown below will be affixed to all Level 2 documents

PERMISSION TO REPRODUCE AND **DISSEMINATE THIS** MATERIAL IN OTHER THAN PAPER COPY HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Check here

For Level 2 Release: Permitting reproduction in microfiche (4" x 6" film) or other ERIC archival media (e.g., electronic or optical), but not in paper copy.

Level 1

Level 2

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but neither box is checked, documents will be processed at Level 1.

*I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic/optical media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries."

III. DOCUMENT AVAILABILITY INFORMATION (FROM NON-ERIC SOURCE):

If permission to reproduce is not granted to ERIC, or, if you wish ERIC to cite the availability of the document from another source, please provide the following information regarding the availability of the document. (ERIC will not announce a document unless it is publicly available, and a dependable source can be specified. Contributors should also be aware that ERIC selection criteria are significantly more stringent for documents that cannot be made available through EDRS.)
